Regarding to claims 1-4, 11, and 12, Koyama discloses a packet communication packet system wherein comprised a connection (telephone) interface line 103 connect to a telephone network (line), a telephone interface 34 connect to a handset 19 (telephone set), a Local Area Network interface 101 connect to a packet network, and a processor (controller circuit) 31 interconnecting the telephone line interface telephone interface, Local Area Network interface, and packet network interface. It should be noted that the processor, depend on the signal arrival information, act as a controller circuit to route between the telephone interface, Local Area Network interface or packet network interface. See Figure 2 col. 5, lines 13-50. In claim 3, Koyama further discloses the Local Area Network interface connects to a packet network by a communication gateway 12 (packet network gateway). See Fig.1, col. 2, lines

17-19. In claim 11, Koyama further discloses a speech packet processor (packet network interface) 33 connect to a packet network. See Fig.1 col.5, lines 28-31.
